[Graduation Date Dec 2019]

5th Annual Undergraduate Student Research and Creativity Conference April 2019

- Presented my underlying groundwork of my capstone that used a peer-to-peer hypermedia protocol to show proof of concept of a block chain ledger.

Skills

- Front End Development
  - HTML

    - CSS
    - JavaScript
- CSS Frameworks
    - Materialize CSS
    - Bootstrap 4
- Back End Development
    - Python
    - Flask
    - NoSQL
    - GitHub
- Adobe Creative Suite
    - Photoshop
    - Illustrator
    - InDesign

Projects

- The Connect

Team project assigned by Southern with the goal of connecting students, teachers and companies looking to form internships.

Contribution

- Team lead
- Worked on front end side
- Managed GitHub

- HeroesDonate

Capstone project based on the want to have a website where users could donate their digital goods. Such as E-Books, Video Game Keys, and other giftable products. A peer-to-peer protocol called Interplanetary File System, was used to host the donated good in a private node swarm. Each transaction was shown on a public ledger to let users know their donation was going to where they wanted. At this point using Solidity, the encrypted digital good would be sent into a smart contract through Ethereum and retrieved when the recipient requested the digital good.
